Applying this compute statement will produce a new variable that estimates applicant's GGPA, but on a standardized scale (mean = 0, Std = 1), rather than on the scale of the population GGPA as estimated from the original modeling sample. The Ggpa_pred and Zggpa_pred variables for each candidate are shown on the right. Apr 3th, 2024.

i. Outliers and "leverage" ("influential") points
ii. Possible transformation of Y and/or X
2. Plots of residuals
I. Stem-and-leaf displays to check for normality and large residuals
ii. Residuals versus fitted or predicted values of Y
iii. Residuals versus each X
3. Partial regression plots:

Away from the multivariate average (of the Xs and Ys) can strongly influence the outcome of the analysis. It is important to consider transformations and outliers before searching for an inferential model. When in doubt, special tools may be useful to flag outliers: leverage or studentized residual values, and Cook's distance. Jan 3th, 2024
